DETAILED ACTION

1. Applicant's election without traverse of Group I (claims 1-4) in Paper No. 7 (04/30/2003) is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, it is confusing and unclear that how one or more scribe cracks can be formed on each side of two sheets of substrates (emphasis added). For the purpose of examination, according to the specification and drawings, it is assumed that at least one or more scribe cracks formed on a side of two sheets of substrates.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2871

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Shishido et al., JP 9-311323.

The above claims are anticipated by Shishido et al. figures 1 and 3 which disclose a method of fabricating a liquid crystal display (LCD) substrate comprising the step of:

- . forming at least one or more scribe cracks (11, 24) on a side of two substrates (1, 2);
- . adhering those two substrates (1, 2) to each other via a sealant (step 301) as claimed, wherein scribe crack formed on sealant area;
- . cutting the adhered substrate (step 304), wherein cutting step is performed by giving an impact on a face opposite to the face on which the scribe crack is formed (e.g., pressurization object 19).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shishido et al., JP 9-311323, in view of Applicant's admitted prior art (APA), figure 5A.

Regarding claim 4, although Shishido et al. do not disclosed a step of cutting the adhered substrate by irradiation of a laser, it would have been obvious to one skilled in the art at the time

Art Unit: 2871

of the invention was made to cut an adhered substrate by irradiating laser on a surface of such adhered substrate, since it is a common practice in the art (e.g, APA, figure 5A) in order to obtain a highly appropriate cutting surface.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nishino et al. (US Patent No. 6,010,384) disclose a seal layer is formed on scribe cracks (figure 10D).
